My Achievements

I have had seven years of experience working in the computer sector, and since 2018, I started working with computers, which has been a professional in the world of computers for four years, during these 4 years, I have done a lot of work and followed a variety of lessons because I was looking for a series of things that always confused my mind, even before I want to enter the world of computers. For example, what is this Google Facebook made of, until I finally traveled to the Islamic country of Iran and continued my programming lessons there until I reached all the answers to my questions, and in addition to reaching my answers in this section, I made three great and great achievements, one is to build a framework that we never need to use external frameworks anymore, and all my friends and Scholars of our dear country, Afghanistan, in the world of web programming, can use this cool and powerful framework for free, and secondly, the library in the JavaScript programming language section, when I first started learning and solving projects in the JavaScript programming language, a series of projects were painful for me and it was very difficult for me, such as making 3D sliders and displaying elements with scrolling. I decided to do something so that everyone does not have this problem that I had easily and without any headache until I created this library, this library can be used completely for free, but unfortunately, due to not having enough money or high capital, I cannot make these two great achievements available to all programs. But with God's help, with the resolution of my financial problems, I will provide it to my dear friends as soon as possible.

My third great achievement, which is the most important and attractive achievement of all, is the messaging application and at the same time similar to Instagram and Facebook, which has the ability to post stories, posts and all the capabilities of Facebook and Instagram, again due to lack of money and other problems that are now plaguing our country, I could not introduce this popular application of mine, which I named Afghan Chat, to our dear people of Afghanistan. Let us all achieve all our long-standing goals and aspirations.

Dedicated to all the free people of the world who have nothing but the thought of progress and peace.
